

Custom Display Panels

Benefits

- ❖ Custom illuminated display and text to your design
- ❖ More informative than panel lamps
- ❖ Less expensive than programmable displays
- ❖ Separate printed legend allows multi-lingual systems
- ❖ Overall size to suit your application and situation
- ❖ Customers logos etc. can be included in or on the panel
- ❖ Easily customised for medium volumes (100 to 500)
- ❖ Various cable entry positions on the rear or side

The display panel is mounted in a frame with a 'black look' panel that appears blank until the display is illuminated. In addition to multi-coloured legends, the display can incorporate various switches and displays such as LCD or TFT. Conventional switches can be mounted through the panel or non-contact switches may be concealed behind the front panel.

The panel can be secured by either screwing through the front face or hidden mounting points fitted behind the panel. Since the display is sealed into the frame to prevent ingress of moisture from the front, sealing under the face of the frame can provide a highly water resistant finish to the mounted panel.

The display is easily kept clean by wiping over with most non abrasive cleaners. If the 'black look' panel becomes badly scratched or damaged, it may be quickly replaced.

The legend text can easily be updated or translated into different languages as the text is printed onto a separate film sandwiched within the construction of the display.

For a quotation, please send a dimensioned drawing of the display area with any text and colour illuminated areas. The standard finish on the frame is a textured aluminium look; other finishes are available. Note mounting requirements and cable entry points and if additional labels are required.
